01 PROFILE

I am a Full Stack Web Developer nearing the end of my course at Lambda School where I have spent the past year writing code and building web applications and SQL databases. I have collected hundreds of hours of coding under my belt and have learned to use a number of frameworks and libraries including React and Node,js.

02 EMPLOYMENT HISTORY

07/2020 — Present

Concrete Laborer at Brothers Concrete Inc.

Vancouver

I currently work in construction during the day(7:30-4:30) and go to Lambda School in the afternoons(6-9). Although my work history doesnt have much in common with the tech industry it has taught me a lot of important skills like always being passionate and proud of your work along with teaching me how to solve problems with a team.

03 EDUCATION

Apr 2020 — Present

Lambda School

Remote

Full Stack Web Development

Lambda School is a well known online boot camp with what I believe to be the greatest structure and curriculum you can find. starting out with javascript fundamentals and moving to things like React, Node.js and computer science topics like algorithms and blockchain.

04 LANGUAGES AND FRAMEWORKS

Feb 2019 — Present

JavaScript

I am very comfortable using javascript and have spent a lot of time studying and going over problems to stay fresh and learn new techniques. I also know how to use event listeners and query selectors to pass data into html elements.

Jul 2020 — Present

React.js

I have built multiple websites with react and am very comfortable with it. I have used state management libraries like Redux. I also know how to use local storage and tokens to make restricted routes and require logins.

Oct 2020 — Present

Node.js

I am comfortable using Node and have also learned how to write in SQL(I have also hoste servers on heroku and used a POSTGRES database). I cant build out a full sized database with everything from middleware, authentication, testing, ect.

May 2019 — Present

LESS/SASS

I know how to use CSS preprocessors to speed up the styling process and make the code cleaner. I also know how to make responsive websites using media queries.

I am comfortable using Node and have also learned how to write in SQL(I have also hoste servers on heroku and used a POSTGRES database). I cant build out a full sized database with everything from middleware, authentication, testing, ect.
